

FENCES | HEMP IMITATION COMBINATION ROPE

6 strands

4 or 6 strands + Fiber Core

Combination rope composed of 4 or 6 galvanized steel strands and covered by hemp colored imitation fibre. It has a high tenacity and a great abrasion resistance. Its special combination of fibre and steel makes this rope particularly effective against vandalism.

Usually it is used in fences on beaches, dune zones and natural environments, because its natural fibre appearance fits the rope on the landscape.

Regarding the polyester covered rope, it has an excellent sun exposure resistance and a special soft touch.

We also can offer this rope in different colors, as blue, green, red, yellow or black.

CHARACTERISTICS

- **Material:** galvanized steel
- **Cover material:** Itsasplus or Polyester
- **Construction:** 4 or 6 strands
- **Color:** hemp
- **Optional:** blue, green, red, yellow or black

- Preformed & postformed
- Excellent abrasion resistance
- Low elongation
- Good flexibility
- Softness
- Anti-vandalism
