

SCRAPER ROPE | COMBINATION ROPE

Combination rope specially designed as a scraper rope. It has an Itsasplus cover that increases its abrasion resistance, and an inside steel that provides the tenacity and strength required to fulfill its labour.

At the same time, the cover protects the inside steel and provides softness to the product, so that avoids the spikes that usually turn up in the steel. This aspect has been vital when designing this product, that has to be in contact with animals.

Diameter	Weight (100m)	Breaking strength
20	0,508	7.010

CHARACTERISTICS

- **Core material:** galvanized steel
- **Cover material:** Itsasplus
- **Construction:** 4 strands
- Excellent abrasion resistance
- Low elongation
- Softness
- Possibility to produce more diameters

*Dimensions are only for information purposes.
